PROJECT AREA AND ISSUES:

- The project area includes Old Forge Court, Old Forge Road (from Old Forge Court to Red Lion Road), and Red Lion Road.
- The drainage systems along these roadways are currently undersized to handle rain from significant storm events.
- Flooding often occurs along Old Forge Road and Old Forge Court during heavy rainstorms.
- This flooding impedes traffic and not only hinders resident access but can also impact emergency response services such as fire, police, and emergency medical service. Detour times can be lengthy.

**IMPROVEMENTS INCLUDE:**

- Construct new storm drain pipes along Old Forge Court, Old Forge Road to Red Lion Road, and along Red Lion Road to the Windsor Woods Canal to increase the drainage system capacity and mitigate flooding.
- Install a new storm drain outlet pipe to the Windsor Woods Canal (at the end of Red Lion Road) to reduce the amount of time it takes for the stormwater to reach the discharge point.
- New drainage inlets and catch basins will also be installed along the pipe routes to assist in capturing the stormwater and reducing the duration of street flooding.
- In conjunction with the storm drain improvements, new water lines are also being installed along the project route, as well as new sanitary sewers along Old Forge Court and Red Lion Road.
- Roadway, driveways, and sidewalks disturbed will be repaired and/or replaced at the completion of the work.
