## PROJECT DESCRIPTION

This project is located along South Plaza Trail from South Rosemont Road to Presidential Boulevard and along Presidential Boulevard from South Plaza Trail to the Windsor Woods Canal. Work includes installation of additional storm drain piping along South Plaza Trail and Presidential Boulevard to the outlet at the Windsor Woods Canal. New drainage inlets and catch basins will also be provided along the route.

In addition, a new water main will be installed along South Plaza Trail and Presidential Boulevard in coordination with the drainage improvements and the existing sanitary sewer line along South Plaza Trail will also be replaced as part of this work.

Roadways, driveways, and sidewalks disturbed will be repaired and/or replaced at the completion of the work. This project is also being coordinated with the fire station along South Plaza Trail to ensure provisions are in place so there is no interruption to emergency services during construction. South Plaza Trail and Presidential Boulevard will be closed to thru traffic at times during construction; however, access will be maintained for homes and businesses.

## PROJECT PURPOSE

The purpose of this project is to assist in reducing street flooding along the project route and to mitigate flooding along South Rosemont Road. South Rosemont Road is a main thoroughfare that is known to flood during extreme storm events, often resulting in road closures and detours impeding traffic flow. This project will reduce the amount of stormwater that currently floods the low point along South Rosemont Road by diverting a portion of the flows along South Plaza Trail to the Windsor Woods Canal.
